Green Graffiti stencil size and material specifications

Give this file to your local sign shop and they can choose from the 3 output sizes listed below to prepare your stencil for use:

- For final size of 24" x 96" output at 1200% and cut from coroplast
- For final size of 18" x 72" output at 900% and cut from coroplast
- For final size of 12" x 48" output at 600% and cut from coroplast

Instructions for use:

Hold the stencil firmly in place on the surface you're planning to powerwash. Sandbags work well to prevent the stencil from moving. Powerwash the type and cursor arrow quickly at a low pressure to prevent overspray creeping under your stencil and blurring the image.

A short video is available at:

<http://stophomelessness.ca/resources/green-graffiti>

Watch it and you'll see how simple, fast and effective this is.
